

## **CODELAB PROJECT 1**

### **DATA CLEANING & PREPARATION**

**Tool Used:** Microsoft Excel

#### **1. Project Objective**

The objective of this project was to clean and prepare a raw dataset for accurate analysis. The cleaning process involved identifying missing values, checking for duplicates, and ensuring that the data was correctly formatted and consistent.

#### **2. Dataset Description**

The dataset used for this project contains **1,200 records and 14 columns**. It contains information such as Order ID, Date, Customer ID, Product, Quantity, Unit Price, Shipping Address, Payment Method, Order Status, Tracking Number, Items in Cart, Coupon Code, Referral Source, and Total Price.

#### **3. Data Cleaning Process**

The dataset was cleaned using Microsoft Excel. The following checks and cleaning activities were carried out:

##### **3.1 Missing Values**

Missing values were identified in the **CouponCode** column. The blank cells were replaced with “**No Coupon**” to clearly indicate that no coupon was used.

##### **3.2 Duplicate Records**

The dataset was checked for duplicate records, and no duplicates were found.

##### **3.3 Duplicate Order IDs**

The **OrderID** column was specifically checked for duplicate IDs. No duplicate OrderIDs were found.

##### **3.4 Data Formatting and Consistency**

The dates, numerical values, and text fields were checked to ensure that they were correctly formatted and consistent.

##### **3.5 Final Blank-Cell Check**

A final check for blank cells was performed, and no remaining blank cells were found.

#### **4. Conclusion**

The raw dataset was successfully cleaned and prepared using Microsoft Excel. Missing values were handled, duplicate records and OrderIDs were checked, and the data formats and

consistency were verified. A final check confirmed that there were no remaining blank cells. The cleaned dataset is now ready for further data analysis.
